Pitch Deck —— NoBugPls

AiversePulse

AI is changing work. Your next move should be clearer

AiversePulse connects people, skills and opportunities with AI-powered insights for a future-ready workforce.

Problem Statement

AiversePulse

Workers & Graduates

- Don't know which skills to learn
- Unsure which roles are in demand
- Hard to find up-to-date guidance

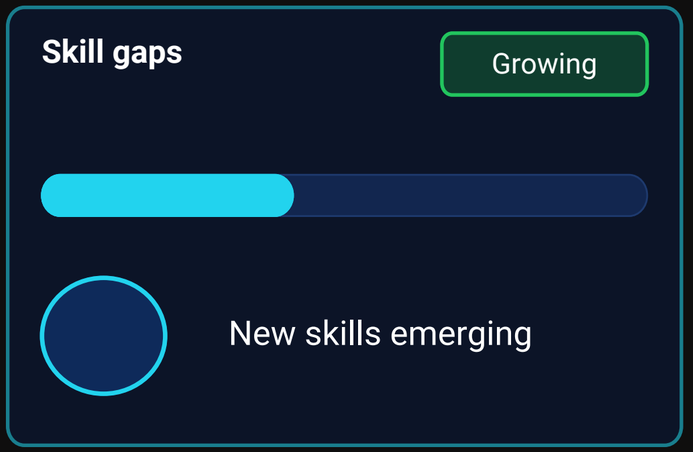

Employers

- Struggle to plan reskilling
- Lack visibility of future skills needs
- Risk of talent gaps

The Gaps

- Outdated job signals
- Static learning pathways
- Uncertain AI-driven changes

AiversePulse Solution

AiversePulse

1. Build Your Profile

Upload your CV or complete a short questionnaire.

2. Live AI & Job-Market Signals

Track the latest trends from trusted sources.

3. Future Role Matches

Get personalised recommendations with match scores and skills gaps.

4. Learning Pathway

Follow a flexible, low-cost reskilling plan linked to relevant SDGs.

5. HR Review

Employers can use the HR tools to review candidates and plan development.

What Makes It Different

AiversePulse

Explainable Role Match

- Every recommended role has a match score and a breakdown of why. It shows which skills you already have, which are missing, and how much each one affects the score
- Most tools return a job title with no reasoning. Explainability builds trust and turns the result into an action: “here is what to build next.”

Verified & Dated Sources

- Every claim cites its source and shows a date. The system only uses credible, public data such as ESCO, job postings and research feeds, and it doesn’t invent jobs, courses or statistics
- Addresses the brief’s biggest risk, AI making things up, and its requirement that every recommendation cites a source.

What Makes It Different

AiversePulse

Evolving Trend Signals

- The system continuously pulls in AI and job-market data, so the Future Skills Radar changes when the data changes. It isn’t a hard-coded list
- Ensure the shown data is the latest data

Scenario-Based Forecasts

- Instead of one prediction, users see several possible futures, such as optimistic, realistic and conservative, or moderate vs fast AI disruption. Each is clearly labelled as an estimate
- More honest and helps users choose paths that hold up under different outcomes.

What Makes It Different

AiversePulse

Human in Control

- AI recommends, explains and plans, but the user makes the decisions. It never makes final career or hiring choices, and users can explore alternative roles and adjust their plan
- Follow the rule AI is a partner, not a replacement, and the brief's human-centred rule

Mock Interview

- After choosing a target role, the user practises with an AI interviewer that asks role-specific questions and gives feedback on answers
- User can have interview experience and improve their interview skills

Product Demonstration

Technical Feasibility

AiversePulse

Data Sources

- ESCO + O*NET
- Job-market & AI trends

>

AI Analysis

- MiniLM + STF-KAN
- Assistive / Agentic scenarios

>

Multi-Agent System

- LangGraph + FastMCP
- Role matching + pathway generation

>

Platform

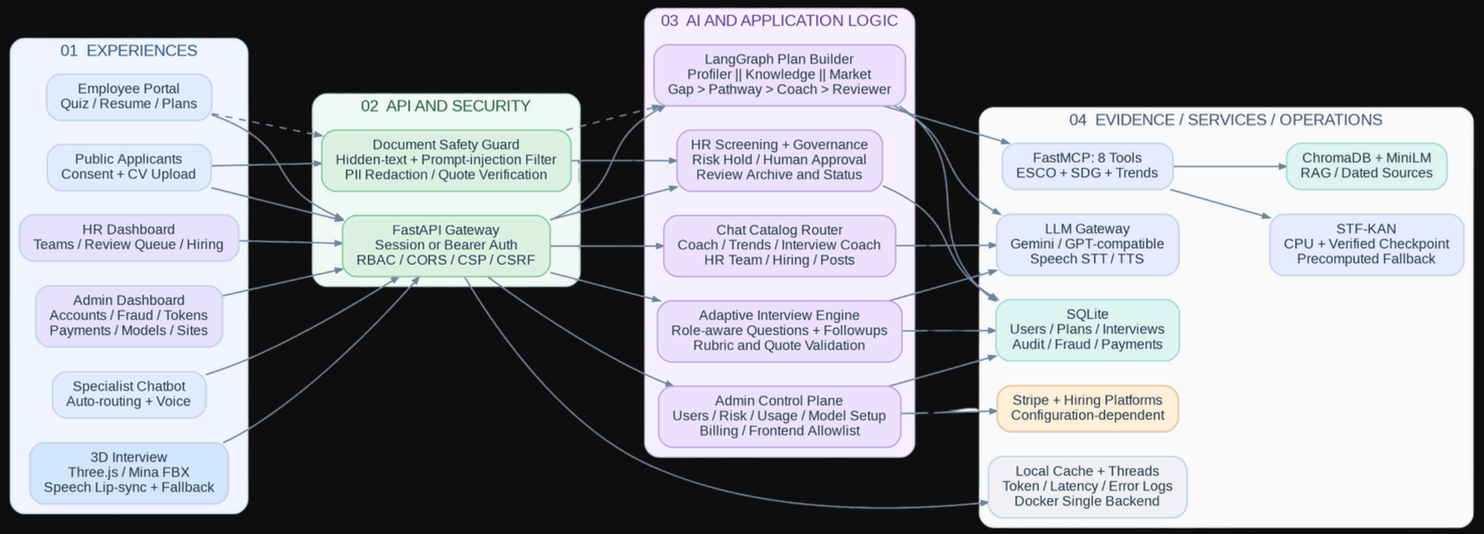

- FastAPI
- SQLite + Chroma
- Replit + RunPod

Tech Stack

- HTML / JS
- Python
- FastAPI + MCP
- SQLite + Chroma
- Gemini + PyTorch

System Architecture

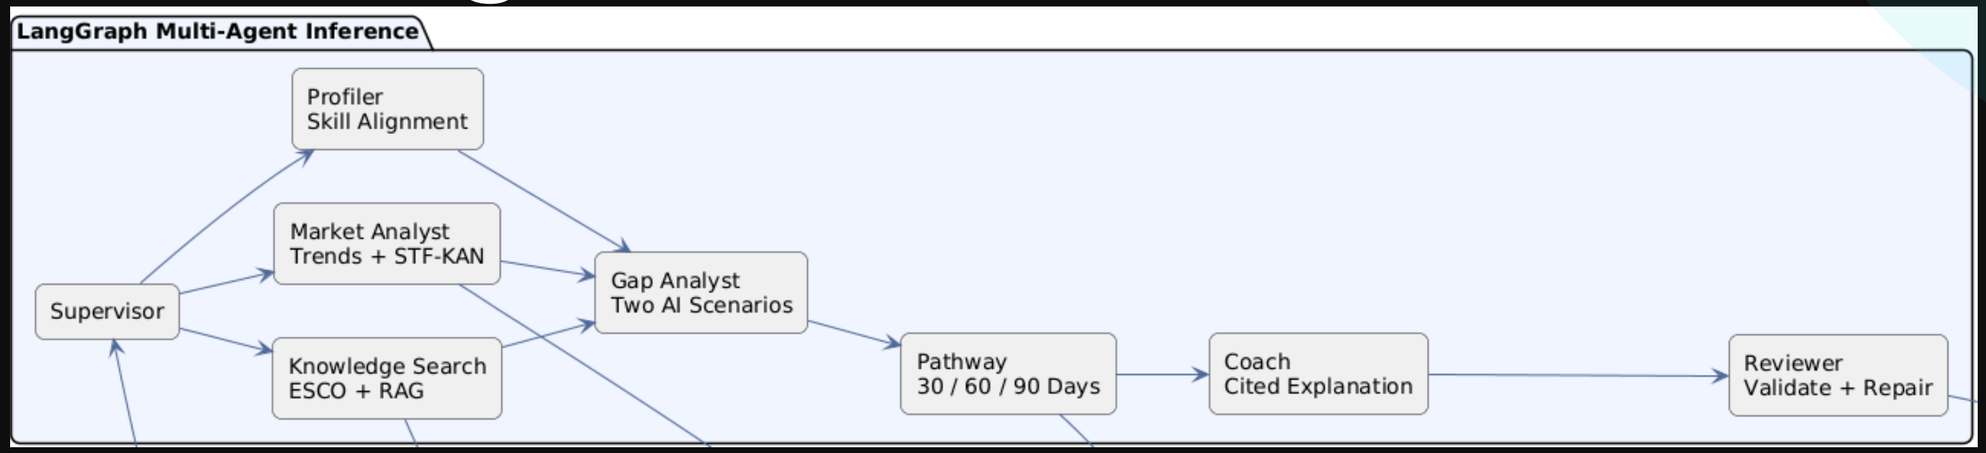

AiversePulse

- Frontend Plain HTML/CSS/JS, no build step. Agent progress streams live over SSE.
- API FastAPI serves the public site, the HR console and the public apply page.
- Agents A LangGraph graph calls 8 FastMCP tools: ESCO search, matching, skill outlook, trends, SDG.
- Storage SQLite for accounts, immutable plan versions and the audit log; Chroma for vectors.
- Compute CPU serving on Replit or Docker; GPU training offline on RunPod

Multi-Agent Workflow

AiversePulse

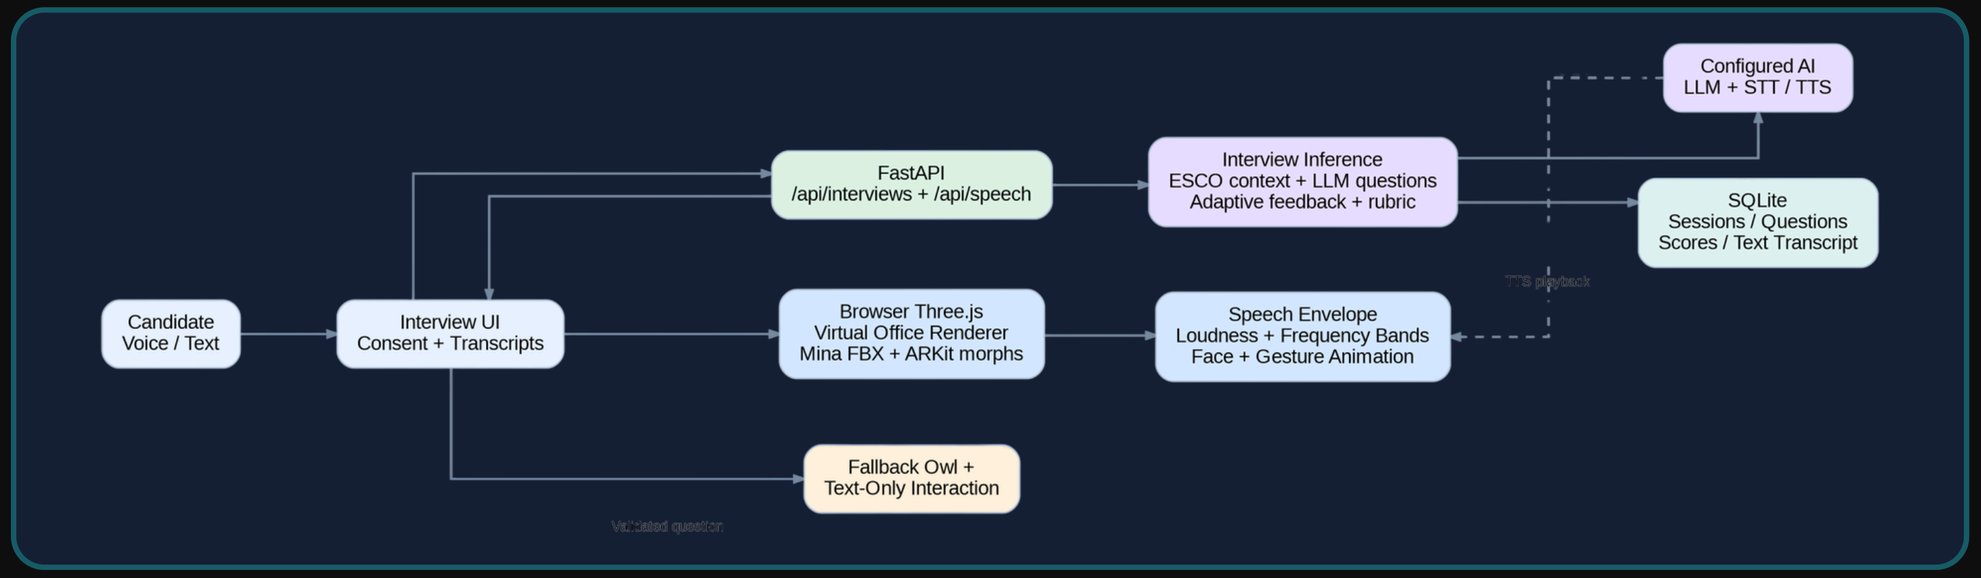

- Route A supervisor answers simple lookups at once and fans complex requests out.
- Parallel Profiler, Knowledge (MCP) and Market Analyst (STF-KAN) run side by side.
- Plan Gap Analyst ranks gaps under two AI scenarios, then Pathway and Coach write the plan.
- Check Reviewer validates schema, evidence, maths and capacity; at most 2 repairs, else flagged.
- LLM Deterministic by default; Gemini or any OpenAI-compatible model is optional.

SDG Impact

AiversePulse

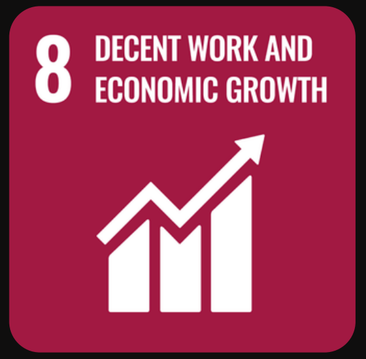

SDG 4 – Quality Education

- Lifelong learning opportunities
- More accessible, inclusive training
- Build future-ready skills

SDG 3 – Good Health & Well-being

- Growth in health-tech and digital health roles
- Less career anxiety through clearer, data-backed guidance

SDG 8 – Decent Work & Economic Growth

- Higher employability
- Stronger workforce productivity
- Fairer transition to new jobs

SDG 9 – Industry, Innovation & Infrastructure

- Skills pathways aligned with emerging technologies
- Better planning for employers adopting AI

Intended Outcomes

- Faster time to actionable pathway
- More skills gaps identified
- Higher pathway completion

Don't just react to the future of work.
Prepare for it.

AiversePulse — Human-centred AI. Personalised career pathways. Real-world impact.
